

A Happy Clean World

By

Jojo Winter

I love my dad! I don't know about you but I love playing games with my dad and I love swimming with my dad. The problem is my dad is always stuck in traffic. I wait an hour and finally when he is home, he comes in the door and my brother and I run and give him a big hug. So one night I was thinking, what if there was a way that it would not take an hour for my dad to get home? What if it only took 15 to 20 minutes? And bam! It hit me! Environmentally Friendly Flying Cars or EFFCs. By stopping traffic and making more family time, that's how I think I can make the world a better place.

Ajc.com says an average person in Atlanta spends 59 hours per year in traffic. That's 59 hours away from your family. You could spend that time playing a board game or playing whiffle ball with your family. Michigan University's study says that more family time makes happier families and I think happier families make the world a better place.

In addition to not spending time with your family, traffic also makes pollution which is really bad for our planet. People can die of pollution. Guess what? Livestrong.com says that the gas that your car produces has poison in it. This poison doesn't let oxygen go to other parts in your body. 53,000 people die a year from this cause. The EFFC doesn't make pollution because it runs on batteries and they are charged with solar power. This car not only lets you spend time with your family, but it also saves our planet and our lives.

Regular cars are bad for our planet but the Environmentally Friendly Flying Cars are good for our planet. They give us more family time, like me getting to play extra with my dad and they also help prevent pollution. Who wouldn't want a happy clean world?!
